

【Document Name】 Abstract

【Abstract】

【Object】 Providing an image data transmitting device and method, in which a user can easily recognize image data after it has been transmitted by keeping the reduced 5 image data of the image that has been transmitted from image transmitting device to other communication apparatus on the image transmitting device side.

【Means for Solution】 Being consisted of a communication device (transmitting and receiving device 60) that transmits main image stored in the storage medium 54 to other communication apparatus and; an information processing device 44 wherein the 10 communication device deletes the transmitted image stored in the storage medium 54 after the communication device transmits the main image stored in the storage medium 54 to other communication apparatus while producing reduced image data of the main image data and storing it in the storage medium 54, or keeping the reduced image data stored in the storage medium, the user can easily recognize the 15 transmitted main image.
